

First Trimester Basic Ultrasound Scan

Name: Stacey Hockett

Date of Exam: 7/1/2013

Referring MD: BMC OB Clinic

Reason for Referral: Spotting

---

LMP: 5/4/2013

G: 4 P:3

MA by LMP: 8 0/7 weeks

EDC by LMP: 2/8/2014

---

Findings: There is gestational sac within the uterus measuring 12 mm, significantly smaller than the expected 21 mm based on LMP. Within the gestational sac is a fetal pole measuring 6 mm in length, significantly less than the expected 14 mm. The fetal pole is motionless and no fetal heartbeat is seen. There is an irregularly-shaped yolk sac within the gestational sac. Based only on the gestational sac and fetal pole length, the pregnancy would be dated at 6 weeks and 6 days.

---

IMP: Non-viable fetus and abnormal yolk sac, consistent with a missed abortion.
