LMP: 5/4/2013

MA by LMP: 9 0/7 weeks

---

Findings: Using transvaginal ultrasound, the uterus is imaged. It again demonstrates an intrauterine gestational sac of 12 mm, and a motionless fetal pole of 6 mm. An irregularly shaped yolk sac is redemonstrated. There has been no change in any of the measurements in 1 week. These findings are diagnostic of a missed abortion.

---

IMP: Missed abortion
